DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-14, 19, drawn to a method for transmission of packetized data in a wireless communication system having a designated packet error rate, classified in class 370, subclass 333.
 - II. Claims 15, drawn to a method, a base station generate subpacket, classified in class 455, subclass 561.
 - III. Claims 16-18, 20, drawn to a method for transmission from a mobile station in a wireless communication system, classified in class 370, subclass 342.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as a base station generate subpacket corresponding to at least one restriction for outgoing communication. See MPEP § 806.05(d).
3. Inventions II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention III has separate utility

such as a method for transmission from a mobile station in a wireless communication system corresponding to at least one restriction for outgoing communication. See MPEP § 806.05(d).

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
